Regarding: Test results for the Petro-gard 220 Synthetic Oven Chain Lubricant

Jill,

The Petro-gard 220 Synthetic Oven Chain lubricant has been tested and approved for use within the ORSCO lubrication systems. The lubricant was tested to determine the spray pattern quality when exposed to oven-like temperatures, specifically for continuous chain lubrication. The results were acceptable and consistent. The lubricant does not exhibit any reaction with the internal seals (Viton, Simriz).
